

SOMPO GLOBAL RISK SOLUTIONS

Professional Services Loss Control

Our dedicated team of risk specialists provides effective tools, specifically tailored to professional service firms, to protect your clients and employees from known and emerging threats.

Whether a legal, accounting or other business matter, successfully delivering the consultative services on which your Professional Services firm has built its reputation, requires in-depth knowledge of regulatory codes and industry guidelines. While building strong client relationships and maintaining a competitive edge are top priorities, understanding and complying with the various professional standards and rules is crucial to your organization's success.

However, preventing loss goes beyond regulatory compliance. It requires the expertise to identify and address risks and implement protocols which create a safe and secure workplace with reliable infrastructure to support your operations. Our dedicated team of risk specialists provides effective tools, specifically tailored to professional service firms, to protect your clients and employees from known and emerging threats. Are you comfortable with your organization's protocol and procedures for the following areas?

- Workplace Violence Programs
- Crisis Management and Disaster Response
- Business Continuity
- Ergonomic Assessments (Office Workstation Design)

... we tailor our Loss Control services to your organization's operations, market environment and priorities, just as you tailor your services to the specific challenges faced by your clients.

Sompo Global Risk Solutions Capabilities

We understand that risk varies widely across the professional services industry and we tailor our Loss Control services to your organization's operations, market environment and priorities, just as you tailor your services to the specific challenges faced by your clients. We combine decades of experience and industry knowledge with a collaborative approach to assist our clients with their risk management programs increasing awareness of the importance of risk mitigation, instilling a safety culture throughout the organization, improving employee morale and productivity, and reducing the frequency and severity of incidents.

A well written risk management program that addresses all key elements, tailors risk mitigation approaches, develops risk mitigation goals and is properly implemented is critical to prepare for the unexpected – such as loss of access to office space, systems and work product caused by property damage, adverse weather, and cyber risks. Equally important is ensuring that your team is well versed in best practices and safety procedures and has adequately planned for disaster response. When an incident occurs, a well thought out crisis management plan and preparation can mean the difference between an enhanced reputation with your clients and lost opportunities and revenue.

In addition to the services referenced above, we also provide the following:

- Main Entrance & High Foot Traffic Area Assessment
- Safety Responsibility & Accountability Assessment
- Development of Client Specific General Liability, Property, or Workers Compensation Self-Inspection Forms
- Accident Investigation Training (in person or webcast)
- Loss Control Surveys (Client Specific Evaluation of Management Safety Systems)
- Material Handling Training
